

# CS145 Mid-term Review

Peng Qi, Karthik Jagadeesh, Sophia Nguyen

August 14, 2014

# Outline

- Relational Algebra
- SQL
- Relational Design Theory

# Relational Algebra

- Relational Algebra is a MATHeMATical language

**MATH**  
Mental Abuse To Humans

- Vocabulary (Relations, Operators)
- Grammar (Syntax)
- Dialects (Sets Model and Bags Model)

# Relational Algebra: Vocabulary & Grammar – Basic Operators & Syntax

- Relations

$R(A, B, C)$

$R$		
A	B	C
"CS145"	2014	"Firas"
"CS145"	2014	"Perth"
...	...	...

Column: Attribute

Row: Tuple

# Relational Algebra: Vocabulary & Grammar – Basic Operators & Syntax

- Basic Operators

Name	Notation	Modifies
Union	$\cup$	Tuples
Difference	$-$	Tuples
Selection	$\sigma$	Tuples
Projection	$\pi$	Attributes
Rename	$\rho$	Attributes and relation
Cartesian Product	$\times$	Tuples and attributes

# Relational Algebra: Vocabulary & Grammar – Basic Operators & Syntax

- Union ( $\cup$ )

$R$			$S$			$\Rightarrow$	$R \cup S$		
A	B	C	A	B	C		A	B	C
1	2	3	4	5	6		1	2	3
4	5	6	7	8	9		4	5	6
							7	8	9

# Relational Algebra: Vocabulary & Grammar — Extended Operators & Syntax

- Natural Join ( $\bowtie$ )

$$R \bowtie S = \pi_{R.a_R, R.a_{R \cap S}, S.a_S} (\sigma_{R.a_{R \cap S} = S.a_{R \cap S}} (R \times S))$$

- Theta Join ( $\bowtie_{\theta}$ )

$$R \bowtie_{\theta} S = \sigma_{\theta}(R \times S)$$

- Extended Projection ( $\pi$ )

$$\pi_{b_1, b_2, \dots, b_m, f_1(a) \rightarrow c_1, \dots, f_p(a) \rightarrow c_p}(R)$$

- Outer Joins, ...

# Relational Algebra: Dialects — Sets Model and Bags Model

- Just like the sets model is stemmed from **set theory**, the bags (multi-set) model is stemmed from the **multi-set theory**.
- What's different?

# Relational Algebra: Dialects — Sets Model and Bags Model

- What's different (in the bags model)?
  - Union ( $\cup$ )  
 $R(A)$  has  $m$  1's,  $n$  2's; and  $S(A)$  has  $k$  2's,  $p$  3's  
What does  $R(A) \cup S(A)$  look like?  
 $m$  1's,  $(n + k)$  2's, and  $p$  3's.
  - Difference ( $-$ )  
 $R(A)$  has  $m$  1's,  $n$  2's; and  $S(A)$  has  $k$  2's,  $p$  3's  
What does  $R(A) - S(A)$  look like?  
 $m$  1's, and  $\max(n - k, 0)$  2's.
  - Selection ( $\sigma$ )

# Relational Algebra: Dialects — Sets Model and Bags Model

- What's different (in the bags model)?
  - Projection ( $\pi$ )  
 $R(A, B)$  has  $m$  (1,2)'s,  $n$  (2,3)'s  
What does  $\pi_A(\sigma_{A < B \vee (A < 2 \wedge B > 1)})R$  look like?  
 $m$  1's and  $n$  2's.
  - Rename ( $\rho$ )
  - Cartesian Product ( $\times$ )  
 $R(A, B)$  has  $m$  (1,2)'s,  $n$  (2,3)'s  
What does  $\pi_{S.A}(\sigma_{R.A=S.B}(R \times \rho_S(R)))$  look like?  
 $R \times \rho_S(R)$ : Schema: (R.A, R.B, S.A, S.B); tuples:  $m^2$  (1,2,1,2)'s,  $mn$  (1,2,2,3)'s,  $nm$  (2,3,1,2)'s, and  $n^2$  (2,3,2,3)'s.  
After selection and projection:  $mn$  (1)'s.

# Relational Algebra: Dialects — Sets Model and Bags Model

- Anything new?
  - Duplicate Eliminator ( $\delta$ )

$$\delta(R)$$

- Grouping ( $\gamma$ ) and aggregation (MIN, MAX, SUM, COUNT, AVG)

$$\gamma_{\text{GroupingAttributes, AggregateFunctions} \rightarrow \text{NewNames}}(R)$$
